Q*bert

VIDEO GAME CARTRIDGE

!#?!

IT'S NOT EASY BEING Q*BERT,TM BUT IT'S FUN.

No one ever said it was going to be easy hopping the irresistible Q*bertTM from cube to cube and staying out of harm's way. Especially when he's trying to avoid creeps like Coily and Ugg.

But, there are times Q*bert can't escape. And just like in the popular arcade game, he doesn't take it quietly. Q*bert mutters a few choice words, puts his nose to the grindstone and comes back for more.

You'll grow so attached to Q*bert, you won't want to stop playing. He's one little character who's good to the last hop.

Now you can have the new Q*bert video game cartridge in your home, too.

For your Atari 2600 Video Computer SystemTM and the Sears Video Arcade.TM Coming soon for Intellivision.[®]

PORTRAIT OF A SAVAGE

This is Tarzan.

Half-civilized, half-wild, this is John Clayton, Lord Greystoke, the legendary apeman created by Edgar Rice Burroughs in 1912 in the *first* of a series of novels, which would be followed by countless

movies, comics and even a TV series.

Yet, none has truly captured the savagery and the spirit of the untamed jungle king, nor remained faithful to Burroughs' original conception of this mythic character...until, *perhaps*, now.

Currently in post-production is the first "definitive" motion picture version of *Tarzan of the Apes*, as scripted by Michael Austin and "P.H. Vazak" (a pseudonym for

Chinatown writer Robert Towne) and directed by Hugh (*Chariots of Fire*) Hudson. Ian (*ALIEN*) Holm is the apeman's friend, D'Arnot. Calvin Klein Jeans model Andie McDowell is his Jane.

And this is Tarzan.

He is 25-year-old French actor Christopher Lambert. And he stars as the noble savage in the forthcoming *Greystoke: The Legend of Tarzan, Lord of the Apes*. ☆

Christopher Lambert, as Tarzan, surveys the African veldt in the forthcoming *Greystoke*.

APEMAN SWINGS INTO VIDEOGAMES

This autumn, just before *Greystoke's* premiere, ColecoVision will journey into the jungle of video games once again, accompanied this time by *Tarzan*, the video game.

In early 1983, ColecoVision and Edgar Rice Burroughs, Inc. completed a long-term contract granting the popular game manufacturer exclusive rights to the Lord of the Apes until 1987. The first Tarzan cartridge will be available originally only in the ColecoVision format, though Atari VCS and Intellivision variations will follow.

Unlike previous ersatz apeman arcade species, this game involves Tarzan and his African friends. The beasts of Tarzan are in danger. Hunters are searching for wall decorations, stalking their prey with ease until the animals warn Tarzan, their lord and protector.

To stop the hunters, the jungle hero is forced to gather the animals, freeing them from a number of traps and dangers. Then *en masse*, they can drive the enemies away. Assisting Tarzan, warning him of impending doom, is Nkima, his monkey friend from the Burroughs books—no cinematic Cheetahs allowed.

Tarzan will swing from treetops and use his acrobatic skills and trusty knife to aid his animal allies, but he mustn't fall into a trap himself or the game ends. As usual, there are varying levels of player difficulty featuring more elaborate traps and shorter time spans to complete Tarzan's jungle mission. ☆

The jungle lord gets into the swing of things with Colecovision.

INTRODUCING

BLUEPRINT™

The Bally/Midway™ arcade memory-twister you can play at home.

Remember playing BLUEPRINT in the arcades? How it drove you nuts? The damsel in distress? The crazy contraption? Fuzzy Wuzzy? Ollie Ogre? The bomb pit? The explosions on the way to the bomb pit? You forgot all that?!!

Well, our new BLUEPRINT didn't forget a thing. It's just as nutty at home as in the arcades, whether you play it on your Atari® 2600™, 5200™, 400/800/1200XL™ or Mattel Intellivision®.

See for yourself. And don't forget to remember not to forget to send in the coupon for up to \$20.00 in CBS Electronics arcade game cash rebates!

After you remember not to forget what to remember, you can't forget to remember what you remembered not to forget.

Don't forget to rescue me. If Ollie Ogre catches me, he'll, he'll...

Forget about getting rescued, Daisy. Your hero will never build his contraption in time.

Says you, Ollie!...

I have to remember which houses had the parts to my contraption... get rid of a bomb every time I make a mistake...

stay out of the clutches of my arch-rival Fuzzy Wuzzy...

and put my contraption together in exactly the right order. Now you'll pay for chasing my girlfriend, creep!

Shown on Atari® 5200™

Here's how to get your cash rebate:

1. Purchase any of the following game cartridges between now and Oct. 15, 1983: SOLAR FOX, GORF, WIZARD OF WOR, BLUEPRINT.
2. Completely fill in the mail-in certificate and mail along with your original dated cash register receipt(s) and the UPC Symbol found on the back of the cartridge box to:
Cash Rebate, P.O. Box 778 Green Farms, CT 06436
3. To qualify for the cash rebate by mail, all of the above items must be sent in their original form. No reproductions will be accepted.
4. Offer good only in U.S.A. Any sales tax must be paid by customer. Offer void where prohibited, taxed, or otherwise restricted.
5. Offer limited to one \$5.00 rebate for each cartridge purchased up to \$20.00 and limited to one \$20.00 rebate per household, address, or organization.
6. The cartridges must be purchased between now and Oct. 15, 1983 to get the cash rebate. All requests must be received by Nov. 1, 1983. CBS Electronics is not responsible for lost, late, or misdirected mail.
7. Allow eight to ten weeks for receipt of rebate.
8. Offer subject to availability of CBS Electronics cartridges and good only while supplies last. No rainchecks or other price/product guarantees made by retailers will be honored.

Limit one \$5.00 rebate for each cartridge purchased up to \$20.00. This certificate must be accompanied by your cash register receipt and the UPC symbol found on the back of the cartridge box. This offer expires Oct. 15, 1983. All requests must be received by Nov. 1, 1983.

*BLUEPRINT, SOLAR FOX, GORF and WIZARD OF WOR are TMs of Bally Midway Mfg. Co. *1981, 1982, 1983 Bally Midway Mfg. Co. All rights reserved.

Where the excitement never ends.™

Inside Noah's Ark-ade II V For Vector-y

How about Global Thermonuclear War?" posits young David Lightman (Matthew Broderick) to his computer in *WarGames*, the hit movie about the ultimate video experience (STARLOG #74). The computer spins out a tracery of lines signifying the U.S. and U.S.S.R., asking the youth to choose his side. These vector symbols, for such they are, mean that this particular computer pastime will be challenging on many levels, ornate and intricate in actual play, and geometrically pleasing to the mind's eye.

Of the two types of computer graphics currently available, the first, raster, is responsible for those realistic high-paintings which decorate a range of games from *Jungle King* to *Zaxxon*. The visuals are often so beautiful that you're inclined to forget just how limited the actual on-screen movements are at any one time. Put simply, too much of the program's memory is occupied by scenery.

Vector graphics, the second, give a game greater flexibility as well as possibility, making up for strictly line drawings by allowing more things to happen during a round. The first successful vector creation, *Asteroids*, embodied this principle, creating a tactile thrust and parry for the spaceship while continuously breaking down those pesky asteroids into ever-smaller—though equally dangerous—chunks. By the time color came to vector graphics, most notably with the divine *Tempest*, an enterprising gamer could count on a fireworking experience with an imaginative abstract perspective.

This experience could be enhanced by the closest sense of depth perception yet developed, barring the theoretical use of holography. A trip down *Tempest's* tube was a breathtaking teleportation. Atari's 1980 *Battlezone* advanced the illusion by creating a desolate post-20th century landscape around which you wheeled your mechanical marvel. Using Dali-esque cubes and pyramids as shields, enemy tanks loomed out of the distance and grew larger in your viewfinder; when destroyed, their explosive pieces would fly in all angles. Suffering a hit, you actually saw the shell roaring at you, your tank's "windshield" splintering as you thudded to a halt.

Atari has continued its investigation into vector possibilities with three new games, each highlighting one of the system's categories. *Gravitar* evolves *Asteroids* to the extent that the piloting abilities required to guide your spaceship become almost as im-

portant as what it does once it gets there. Navigation is the key, traveling around the perimeters of a series of planets, securing points by blasting enemy aircraft while docking at fuel depots to keep your own supply substantial. The craft is as skittish and temperamental as *Joust's* ostriches, but the careful player will develop a delicate control which goes far beyond trigger mashing.

Quantum bears a slight resemblance to *Tempest* in its Etch-a-Sketch vector look and feel. The object is to draw a circle (or more likely a squiggle) around your chosen target. For those who like *Qix* (a Taito coin-op most recently welcomed to Atari's 5200 library), here's another design game which doesn't stop kicking.

Black Widow is at once the most obvious and unique of Atari's new games: obvious in the sense that the very nature of vector graphics lends itself to spinning a web; unique in that the insect kingdom has never been treated as sympathetically or interactively as here. Forget blasting anything that moves as in *Centipede* and *Millipede*. Your spider does indeed scrag her share of grenade bugs, but she also tags grubsteaks, pushes eggs off the web, and in short, creates her own eco-system by the time the first screen is finished.

Sega has remained close to the outer space front in its two vector entries, *Tac-Scan* and *Star Trek*. The first, now available in a home version for the Atari 2600, places you at the helm of a squadron of ships madly hurtling through hyperspace. When you enter the "space warp tunnel" which transports you from screen to screen in *Tac-Scan*, the dizzying effect is something akin to an interstellar roller coaster. Watch out as you steer your six (or less) ships unscathed through a variety of laser dangers.

Star Trek, of course, should immediately interest STARLOG readers, and in recognition, Sega has given us the most challenging and intriguing game of the year, if you can call it a game. Sega refers to it, quite rightly, as a Strategic Operations Simulator. It simulates "actual battle conditions encountered by Federation Starships while on patrol, enabling Cadet Trainees to learn Federation tactics in combating the Klingon threat."

This goal is accomplished by a tactical realism which requires not only lightning reflexes but decision-making powers as well. You choose your own weapons: phasers which endlessly pick off one Klingon battle cruiser at a time or photon torpedoes, which

destroy many ships but on a more limited basis. The burden of defense is borne by shields which, if not sustained by periodic visits to a Starbase repair station, leave the *Enterprise* open to attack.

By the time you reach the Nomad round, with a robot ship depositing unstable chain reaction space mines around your quadrant, you should be worth every one of your Strategic Training Units (called 'points' on Olde Earth). What makes *Star Trek* work far beyond most media spin-off games (*Tron* excluded) are its vector graphics, which instead of attempting to caricature the TV show, provide a re-creation every bit as thought-provoking as the original. Well, almost. The great Trekkian metaphysical puzzle—Vulcan logic versus human emotion, and how the two needs must intermingle—is never addressed. That's a job which lies far beyond vector graphics, out where no man has gone before.

Completing the triple crown of vector entrepreneurs is Cinematronics, an underrated company which seems committed to balancing on the cutting edge of game technology. Its earlier vector entries, 1978's *Starhawk* and 1979's *Sundance*, exhibit a sense of rhythm as hypnotic to watch as juggling. This statement is particularly true of *Sundance*, an extremely rare, hard-to-find game in which you bounce miniature suns between two trampoline-like grids. The object is to press one of nine buttons, each representing a square in the grid, opening and catching the suns or exploding them with novas. You also have the option of playing with no grids, finding holes in the very fabric of the universe. $E = mc^2$ to be sure.

This year's Cinematronics game is *Cosmic Chasm*, based around the *Asteroids* principle. You move from polygon to polygon along a chain which resembles a chemical equation: your ship enters each nucleus, shoots the various enemies, and then powers its way into the next. It might seem conservative compared with *Starhawk's* rotating planet, but then Cinematronics has been preoccupied with waging its own real-life struggle lately with a particularly nasty game called *Chapter 11*. I wish Cinematronics luck.

Notwithstanding, the company seems more enthusiastic than ever and has recently begun investigating the use of laserdisc technology, recognizing a restless player generation hungry for new sensations. "We may or may not continue to build conven-

By Lenny Kaye

tional high-speed vector games," Tom Campbell of Cinematronics said recently, but his interest obviously lies in this new blend of filmed action and computer movement. Sega has already tested an *Astron Belt* laserdisc cockpit game, where players dodge footage of dogfighting combat rocketships. Using similar Disney-type cartoon visuals, Cinematronics recently unveiled *Dragon's Lair*, an interactive sword-and-sorcery collaboration with Advanced Microcomputer Systems and animation master Don Bluth (see STARLOG #74).

As a computer tongue, vector graphics are here to stay. Outside the arcades, GCE's Vectrex system, which provides its own stand-alone monitor and games like *Berzerk*, *Clean Sweep*, and yes, *Cosmic Chasm*, produces a product truly unique in the home gaming world. In a future issue, we'll take a closer look at the myriad marvels of Vectrex and its games, a use of language which shows us a different way to view our new video world.

* * *

For an epilogue to our two-part arcade survey, let's take a moment to gaze longingly at Atari's *Star Wars* game. The movie, profiled profusely in these pages, was perhaps the *single* greatest influence on gaming evolution when it soared into theaters in 1977, and it's no coincidence that the video sonic boom followed closely on the heels of the Death Star's destruction.

Star Wars is the first full-blown result of an agreement between Atari and Lucasfilm announced in June 1982 at the Chicago Consumer Electronics Show, not counting the ill-fated *Raiders of the Lost Ark* 2600 cartridge which debuted last Christmas. Perhaps because of this crisis in expectation (was the game *that* bad?), Atari has kept the wraps on its *Star Wars* blockbuster until the last possible moment.

Available in both cockpit and upright versions, the game contains three different screens per difficulty level. You hear snatches of the John Williams score along with the actual voices of Luke Skywalker and Obi-Wan Kenobi, and are cheerily advised by R2-D2. The first sequence features a space chase against the minions of Darth Vader; the second requires the player to destroy stationary towers and bunkers; and the third reprises the film's finale by swooping down a narrow tunnel to fire photon torpedoes into the Death Star's exhaust port.

You've played variations on this theme *many* times before, but that's only because *Star Wars* was there first. When the Death Star explodes at game's end, Obi-Wan nods approvingly and says "Remember, The Force will be with you always." In a galaxy far, far away, he might have been referring to video games as well. ★

THIRD PRIZE (100): EWOK™ ADVENTURE GAME CARTRIDGE

FOURTH PRIZE (1,000): RETURN OF THE JEDI™ BASEBALL CAP

JEDI MASTER™ VIDEO ROOM

*Enter the Death Star™ Battle
Home Video Game Sweepstakes.*

WIN! OVER 1,150 PRIZES! PARKER BROTHERS

NO PURCHASE REQUIRED. HERE'S ALL YOU DO:

1. To enter, complete and mail an official entry blank. Be sure to select which scene comes first in the movie, and which screen comes first in the Home Video Game.
2. Enter the sweepstakes as often as you like, but each entry must be mailed separately to:
Death Star Battle Sweepstakes
Post Office Box #621, Lowell, IN 46356
Entries must be received no later than June 30, 1984.
3. You may obtain a Free Official Entry Blank by sending a stamped, self-addressed envelope to Death Star Battle Sweepstakes, P.O. Box #575, Lowell, IN 46356. The correct answers to which scene and screen comes first may be obtained by sending a stamped, self-addressed envelope to this same address, marked "CORRECT ANSWERS" in the lower right hand corner of the envelope. Residents of Washington State need not stamp their return envelope.
4. Winners will be selected in random drawings from among all correct entries received by VENTURA ASSOCIATES, INC., an independent judging organization whose decisions are final. The odds of winning are determined by the total number of entries received.
5. One major prize to a family. No substitution for prizes as offered, except as may be necessary due to availability. Taxes are the responsibility of winners.
6. Sweepstakes open to residents of the United States. Employees and families of Parker Brothers, their advertising and production agencies, VENTURA ASSOCIATES, INC., Lucasfilm Ltd. (LFL) and suppliers of prizes are not eligible. Void where prohibited by law. All federal, state and local regulations apply. Winners will be asked to sign an affidavit of eligibility and their names and likenesses may be used for publicity purposes.
7. For a list of major prize winners, send a self-addressed, stamped envelope to: Death Star Battle Sweepstakes Winners List, P.O. Box # 783, Lowell, IN 46356.

Introducing five ways to make your Atari® 5200™ more exciting.

CBS Electronics is now the source of a big variety of exciting games never before available on the Atari® 5200.™ Now you can really plug into the excitement five different ways... each one a thrilling test of your skill and concentration.

There's popular arcade games like Bally/Midway's GORF™ - where you must muster all your strength to defend against flying Gorfs, deadly Droids, Kamikaze Invaders, Laser Attackers and Neutronium Ships. WIZARD OF WOR™ - you must outwit and outshoot the sinister Wizard in the dreaded dungeons of Wor. And BLUEPRINT™ - which lets you try to prove that chivalry is not dead. Only you have the blueprint for the machine that can stop mean Ollie Ogre and save fair Daisy Damsel.

Plus there's K-RAZY SHOOT-OUT™ - *Electronic Games Magazine's Computer Game of the Year*. It's an incredibly fast-paced test of your marksmanship against alien Droids. And there's MOUNTAIN KING™ - an ever-exciting journey through diamond-laden caverns in search of the elusive Flame Spirit... the mystical key that unlocks the Temple Chamber which holds the Golden Crown.

It's five great ways to add to your Atari 5200 video game selection. So check out the video games from CBS Electronics. And discover how much more exciting your Atari 5200 just became.
